

CORPORATE OVERVIEW

Excoflare Technologies is India's emerging software development and service provider offering offshore IT solutions, high-tech product solutions, Technology consultancy and cutting edge technologies.

- Commitment to quality
- Customer satisfaction
- Innovative solutions
- Cost-effective approach
- Cutting edge technology solutions

PROJECT LIFE CYCLE IN EXCOFLARE

PHASES OF PROJECT LIFE CYCLE

- Initial Technical Analysis and Proposal
- Initial Business Analysis and Proposal
- **Implementation and Development**
- Support

IMPLEMENTATION AND DEVELOPMENT

This is the phase, where actual development of the project takes place. The actual work is divided into a number of milestones, and progresses through a number of transparent, measurable and distinctly identifiable sub-phases.

IMPLEMENTATION AND DEVELOPMENT

This phase has 2 sets of parallel operations:

- Development
- Quality Adherence

IMPLEMENTATION AND DEVELOPMENT

Under Development phase, all the development activities are carried out, divided into some sub-phases and milestones.

Under Quality Adherence phase, the activities of development phase are monitored so that the development activities are maintained and adhered as per strict and vigilant quality standards.

DEVELOPMENT CYCLE

The Development Cycle is divided into primarily 4 sub-phases. It is also divided into a number of milestones depending on the project size.

- Project Analysis
- Development
- Testing and Bug Fixing
- Final Timely Delivery

At Excoflare, we believe “A well defined Analysis leads to a well-coded development and finally a well-managed project.” Hence, We further divide the analysis phase into a number of small, important and very interactive sub-phases, which lays the foundation of our work.

QUALITY CYCLE

The Quality Cycle runs in parallel with development cycles. It is also divided into 4 corresponding sub-phases.

- Quality Goal Setting
- Quality Standards and adherence
- Quality Analysis
- Quality Reporting

Excoflare has a separate dedicated group of Quality Experts who define the quality standards for the developers, set the quality goals and objectives, monitor the adherence to standards, make quality analysis and finally they also assess the quality reports.

QUALITY PHASE CYCLES

- Quality Goal Setting: This quality assurance group sets a quality policy and objective before the development team in the project analysis phase. This describes the coding standards, naming convention, modular approach, innovative idea inclusion, and a maximum defect/bugs target.
- Quality Standards and adherence: The development team follow the guidelines established by the quality group and try to attain the quality objectives. Use of Version control softwares, backup tools etc. are followed by the development teams to attain these goals.

QUALITY PHASE CYCLES

- Quality Analysis: The quality group monitors and makes a thorough analysis of the quality. Lots of criteria are taken into account while analyzing the quality. The conformation to the requirement, No. of Bugs reported, deviation from required and proposed solution, delay in project schedule etc. are all considered as parameters for quality assurance.
- Quality Reporting: A quality report is prepared by the Quality Assurance Team, which discusses the quality issues to the project, quality control measures taken, bugs reported and fixed, and complete test case reports.

PROJECT ANALYSIS

- At Excoflare, this is considered the most important phase of a project. This lays the foundation of a well-developed project, and hence given the utmost importance.
- Excoflare, being a quality service provider, and motivated by innovation and technology, this phase is divided in 5 small, but important sub-phases.
 - Project Discussion along with Client
 - Brainstorming session and Suggestions
 - Suggestion Discussion and Approval by Client
 - Quality and Tools Group meeting
 - Final Project Planning and HLD Preparation

PROJECT ANALYSIS SUB-PHASES

- Project Discussion along with Client: A meeting is organized between the development team and the Client where scope of the project is analyzed.
- Brainstorming session and Suggestions: The development team undergoes a brainstorming session for making any valuable suggestions to the project.
- Suggestion Discussion and Approval by Client: The suggestions are discussed, critically examined and then approved by Client for inclusion.
- Quality & Tools Group meeting: The quality team and Tools group discuss various quality issues, objectives and standards for the project.
- Final Project Planning & HLD Preparation: Project division into milestones, project scheduling and HLD preparation are performed in this phase.

CENTER OF EXCELLENCE

Excoflare Technologies has expertise and experience in 6 major domains. However, being an innovative solutions provider, it always welcomes new domains with open arms and provides the best professional services possible.

Centers of Excellence:

- Mobile application development
- Web application development
- Telecom application development
- Desktop application development
- Games application development
- Mac application development

MOBILE APPLICATION DEVELOPMENT

Verticals

- **VoIP solutions**
- **Location Based Services(LBS)**
- **Mobile Map Applications**
- **m-Commerce applications**
- **Wireless Application Protocol(WAP)**
- **Multimedia Applications**
- **Gaming Applications**

Center of Excellence

- **Symbian**
- **J2ME**
- **Windows**
- **Blackberry**
- **iPhone**
- **Android**
- **Brew**

WEB APPLICATION DEVELOPMENT

Verticals

- **Web Portals**
- **Social Networking sites**
- **Online Bidding Forum**
- **Geographical Info Site(Map)**
- **Digital Right Management(DRM)**
- **E-Commerce Solutions**
- **Online gaming solutions**

Center of Excellence

- **XHTML, CSS**
- **Flash**
- **Java**
- **PHP**
- **J2EE**
- **ASP .NET**
- **CMS**

TELECOM APPLICATION DEVELOPMENT

Verticals

- Asterisk PBX
- A2Billing
- Network Address Traversal (NAT)
- Simple Network Management Protocol(SNMP)
- SIP Express Router(SER)
- Rating and Billing Engines

Center of Excellence

- Asterisk
- Java
- C/C++
- NetBSD
- FreeBSD
- OpenBSD,

DESKTOP APPLICATION DEVELOPMENT

Verticals

- **IM Applications**
- **Java Applications**
- **Games Applications**
- **Thick Client applications**
- **Other Desktop Applications**

Center of Excellence

- **C/C++**
- **Java**
- **Visual Studio**
- **.NET Framework**
- **XNA Framework**

GAMES APPLICATION DEVELOPMENT

Verticals

- **2D Game Applications**
- **3D Game Applications**
- **Online Game Applications**
- **MMO Game Applications**
- **Mobile Game Applications**
- **Flash based Games applications**

Center of Excellence

- **C/C++**
- **Java**
- **PHP**
- **Flash**
- **.NET Framework**
- **XNA Framework**

MAC APPLICATION DEVELOPMENT

Verticals

- **Mac Desktop Applications**
- **Voice Recognition Application**
- **Mac Games Applications**

Center of Excellence

- **Objective C**
- **Cocoa**
- **AppleScript**
